

Advanced Double Doctoring

Applications

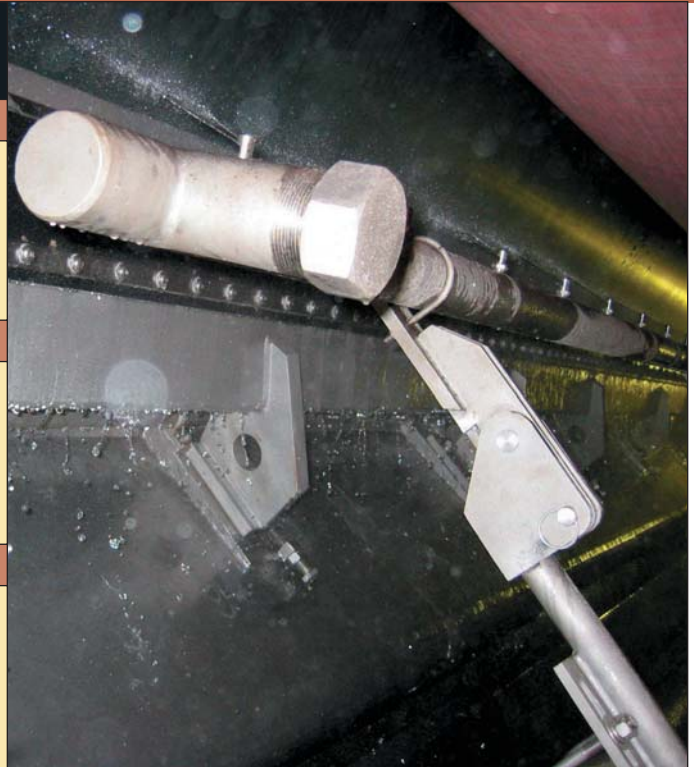

The Supertech double doctoring system is used on multi-nip press rolls to effectively remove fiber and other debris that may build up on the center and top press rolls. Based on the double doctoring concept, Supertech extends this patented design with its unique mounting of the lead blade.

Features

- ▶ Doctor blades mounted on two fully adjustable brackets
- ▶ Integrated shower lubricates blade and flushes out build-up
- ▶ Leading edge blade holder is mounted on a separate, adjustable bracket
- ▶ Direct access to the pit from both doctor blades

Benefits

- ▶ Highly effective removal of fiber or debris build-ups
- ▶ Real-time visual access to both doctor blades and shower nozzles
- ▶ Compact footprint provides easy access for cleaning
- ▶ Compatible with all doctor blades and shower nozzles

A blade for every application

Building on the innovative brands of Vickery, Lodding, and Web Systems, Kadant is recognized as a leader in the development and manufacture of doctor blades, blade holders, and doctor systems. We offer a wide range of patented metal and synthetic blades for application-specific installations, and a full line of profiling equipment for curl control and improved moisture profiles during coating, laminating, printing, and sheeting processes.

Our rapid response team, 24-hour service support, and experienced staff means you can count on Kadant to help keep your machine running cost-effectively with advanced doctoring and profiling technologies.
