

Syphon Elbow

Applications

The 45 degree Locking Elbow is the first syphon elbow to feature a pinless design. The Locking Elbow is designed for high-speed, small roll diameter applications. The stainless steel horizontal body is secured to the vertical leg using a proprietary locking mechanism. As an integral component of the steam joint, the Locking Elbow is a maintenance-free, reliable syphon elbow.

Features

- ▶ Stainless steel construction
- ▶ Patent pending pinless design
- ▶ Simple installation tool
- ▶ Increased robustness of syphon system

Benefits

- ▶ Corrosion resistant materials
- ▶ Easy installation and removal
- ▶ Increased reliability
- ▶ Capable of blind installation
